Item # 1076, Model ASG Specific Gravity Testers

Specific gravity is determined by taking a sample of known size, weighing it in air, then weighing it in a predefined test solution of a precise density, and then calculating the difference. The resultant is the specific gravity.

The Model ASG is used to determine the specific gravity of uncompounded, compounded, and reclaimed stocks of unvulcanized rubber and rubber-like materials. It conforms with the requirements of ASTM.

The Model ASG comes complete with a hookup to a PC with BENZWIN2000

Specifications

Software	BENZWIN2000
Test Standard	ASTM
Software Tester	Dry weight Specific gravity Wet weight
Application	The Model ASG is used to determine the specific gravity of uncompounded, compounded, and reclaimed stocks of unvulcanized rubber and rubber-like materials.
